

DIGITAL FESTIVAL SUBMISSION

Common Festival Platform

Instead of filling out a countless number of submission forms handwritten for an ever growing number of film festivals, reelport now enables filmmakers to upload their data *and* their filmfile on the reelport server once and submit their film to all of reelport's partner festivals. Festivals can keep down their investment in working on a database. Reelport was generated as a joint submission platform of some of the most important European film festivals such as Oberhausen, Göteborg, Tampere and counts now thirteen partner festivals all over Europe.

Digital Submission

If filmmakers have their film in a digital format, they can either upload the filmfile via internet or send a DVD to reelport. The filmcredits and the filmfile need to be uploaded once only but can be submitted to all participating festivals.

The festivals on the other side can download these filmfiles as much as import the filmcredits into their own databases. The filmfile can be downloaded in preview quality, but reelport also offers the possibility to host the filmfile in screening quality. Additionally reelport offers the service to manage other files such as filmstills and press releases.

Filmmakers have to register to open an account where the film data and their personal data are stored. Festivals work with an interface that gives them an access to all the necessary filmcredits and the contact data of filmmakers and other submitters. Thus, the festivals can use these data for their own purposes, such as the program for their print catalogue, their website and further promotional purposes.

Reelport's advantages:

- One submission form for several festivals and no costs for the printing of copies
- Low or no costs for the shipping of the films
- No VHS copies and no paper forms
- No manual data recording in any database
- Only one digital film format and access to a great number of films for festivals
