

Online Film Catalogue

On April 15th reelport goes online with its new Film Catalogue

Search and view films all around the world, acquire film rights and copies – online!

With its new Online Film Catalogue, reelport offers a service for rights owners on one hand (producers, filmmakers, distributors) and buyers on the other hand:

In the Online Film Catalogue buyers can not only search, view and acquire film rights; they can also obtain the digital film file in the quality that is required for exhibition in **cinemas, VoD-services, schools, on mobile phones or on IP-TV**. With the unique combination of rights clearance, encoding and digital delivery services, reelport makes films accessible at all times to buyers from all around the world.

Distributors and producers are invited to present their films on the reelport platform. The rights owners can here offer the preview file as much as the master file, the digital film file, that is suitable for a professional exploitation.

The **buyer** can search within the catalogue with the help of numerous search options (title, country, filmmaker, etc.) and directly view the film or a trailer of the film that he is interested in. Furthermore he will get information about the licence territories, available licences and type of exploitation licences. The buyer can then acquire on the reelport platform not only the film rights he wants, but also the according digital film file in the quality and format he needs for his specific type of exploitation.

The Online Film Catalogue thus offers to the buyer and rights owner a time saving digital all-round service. So no more complicated ordering of preview copies, time consuming search for film copies and endless negotiations of rights. Costs for transport and subtitling will be reduced. The new Online Film Catalogue is a digital market place, where film files and rights will be accessible easily.
